Slats

SLIM FIBER

Slats

Fiber Board is a material manufactured from composition of wood fibers mixed with resin and wax, pressed into flat panels under high temperature and pressure. With our expertise we have come up with Louvers made from these boards, which not only work as a base product but also as a Decorative Panel.

Why do we need Fiber Slats?

It is an economical product if compared with other options of planks or louvers available in the market.

It is consistent throughout, so cut edges appear smooth and will not have voids or splinters.

Consistency and smoothness of the material allow for easy cutting and detailed designs even after Duco Paint*

Duco Paint is a premium quality air drying paint which is ideal for FIBER SLATS.
